Vecoplan biomass technology

VECOPLAN Limited provides state-of-the-art solutions for processing, recycling and recovering waste materials, production, storage and feeding of alternative fuels such as RDF and SRF, chipping, processing, and storage of virgin and waste wood as well as other biomass fuels.

Vecoplan's experience in biomass preparation includes a complete planning process, development of procedures with the end customer, delivery of all machine technology, installation and commissioning for small or big heating plants. Vecoplan is frequently required to deliver high levels of support particularly during the approval procedure for plant. This was the case with the Linz AG Strom plant which was ready for acceptance runs in just nine months.

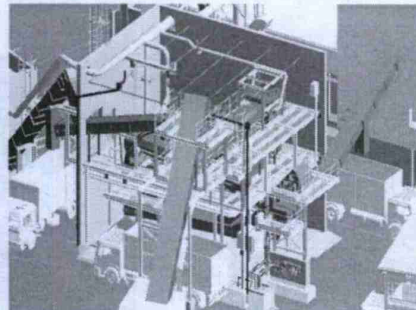

To find out how Vecoplan Limited can help businesses, meet the team at this year's **RWM** 2009 NEC, Birmingham, hall 18, stand 1300.
